# All About Earth Day

Earth Day is celebrated every year on April 22 to help people learn about the importance of protecting our planet. It was first celebrated in 1970 in the United States and is now observed by millions of people around the world. The main goal of Earth Day is to raise awareness about pollution, deforestation, climate change, and the importance of conserving natural resources like water, air, and soil.

People celebrate Earth Day in many ways. Some plant trees and flowers, others clean up parks, rivers, and beaches, and many schools and communities organize recycling drives. People are encouraged to reduce, reuse, and recycle to help the environment. Earth Day also teaches us to save energy, protect animals, and take care of our planet every day, not just on April 22.

Earth Day reminds us that every small action matters. Turning off lights when not in use, walking or cycling instead of using cars, using reusable bags, and planting gardens are all ways we can make the Earth a cleaner and healthier place. By working together, people of all ages can make a big difference for the environment.

## **Fill in the Blanks:**

Earth Day is celebrated every year on \_\_\_\_\_.

The first Earth Day was celebrated in the year \_\_\_\_\_.

People are encouraged to \_\_\_\_\_, \_\_\_\_\_, and \_\_\_\_\_ to help the environment.

Planting \_\_\_\_\_ and cleaning up rivers are common Earth Day activities.

Turning off \_\_\_\_\_ when not in use helps save energy.
